4th January 2014

The objective of this application is aimed to assist the large student community across all disciplines. A life of any aspiring student is no walk-in-the-park and it would be nice if there is someone ``in their hands" who can always assist him/her towards achieving their dreams. This is what this application is intended for.

This application aims to help students manage all their course-work including lectures and assignments that they learn in schools and colleges or even at home and be part of their daily routine. It can help them by keeping track of their daily chores. This includes a reminder of all the important upcoming events like due date of assignments so that they do not miss a thing. It can also help them store and access all their important resources in one place. All this can be made available with just a few clicks.
